

As a local broadcaster I am asking the FCC to reconsider allowing satellite radio permission to broadcast local programming. We provide hourly weather forecasts as well as news and traffic info to our local community. In addition we also provide countless hours of free airtime and public service in nearly every county we serve. To allow the satellite companies this new access, is clearly an infringement of terrestrial radio. It is also a blatant broken promise made to the FCC by the satellite companies. Thank you in advance.
